

Bauerfeind AirLoc® Stabilizing Ankle Orthosis

Bauerfeind AirLoc is a stabilizing orthosis for the ankle. The anatomical contouring of the plastic shells, the individually adjustable Velcro® fastenings, and the inflatable air cushions make it a very effective and comfortable brace. AirLoc counteracts ankle twisting and stabilizes the lateral ligaments of the ankle.

FEATURES

- AirLoc is a stabilizing orthosis incorporating an innovative flexible shell which facilitates optimal adaptation to the individual foot width and the degree of swelling
- The plastic shells are anatomically contoured and therefore fit the ankle comfortably
- Patient-friendly fitting with four individually adjustable Velcro straps
- The Velcro straps are specially cut to match the patient's individual calf shape
- Individually inflatable air cushions facilitate precise fitting for the respective degree of swelling
- The AirLoc system provides a high degree of stabilization for the ankle
- The streamlined shell design fits easily in a shoe
- Latex Free
- AirLoc is available in a Right and Left version.
- Available in Black or Titanium

MODE OF ACTION

- The orthosis supports sensorimotor function to counteract ankle twisting.
- The orthosis stabilizes the lateral capsular ligaments of the ankle, particularly when used in combination with a shoe.

INDICATIONS

- Acute capsular ligament injuries of the ankle
- Chronic instability
- Post-operative rehabilitation
- Prevention against further ankle twisting
